The English

Chapman's and Traveller's

ALMANACK

For the Year of Christ,

1704.

Wherein all the Post-Roads, with their several Branches and Distances, the *Marts*, *Fairs*, and *Markets* in *England* and *Wales*, are *Alphabetically* disposed in every Month; so that the Place *where*, and the Days on *which* any of them are *kept*, is immediately found out.

To which is added (8)

A TABLE of ACCOUNTS

READY CAST UP,

For the *Buying* or *Selling* of any *Commodity*, by Number, *Weight*, or *Measure*, from One *Farthing* to Ten *Pounds*: and of any *Quantity*, from One to Ten thousand.

WITH

A SUN-DIAL, and other TABLES and things, Useful for all Travellers, Traders, and Chapmen whatsoever.

ALSO,

The Rising and Setting of the SUN and MOON, the Tides, and whatsoever else is necessary for an Annual

ALMANACK.

IN the Fifth Column of this *Almanack*, you have the *Age* of the *Moon* standing against every day in the Year, by help whereof and this little *Table*, you may nearly find

I. At what hour and minute the moon will be just in the South, either evening or morning.

II. How many hours and minutes she will *shine*, either at night or next morning.

III. At what time the moon *riseth* or *setteth*.

IV. The *hour* of the *night*, by the *shadow* of the *Moon* upon any *Sun-Dial*.

I. To find at what time the Moon will be due South.

Example. Upon the 10th of *March*, the Moon being then 10 days old, I would know at what time the Moon will be upon the *Meridian* or *South*.

Look in the first Column of this Table for 10, the *Moons Age* increasing, and right against it in the second Column, you shall find 8 hours 0 m. at which time the *Moon* will be just *South* in the evening.

II. To find how long the Moon shineth.

Example, Upon the 4th of *March*, the Moon that day being 6 days old I would know how many hours and minutes *shineth* that night.

Look

Look for 6 (the *Moons age*) in the first Column of this Table, and right against it (in the third Column) you shall find 4 hours 48 min. and so long will the *Moon shine* that *Evening*, because the Moon increaseth.

III. To find at what time the Moon Riseth and Setteth.

1. If the Moon be increasing, that is, if she be lesse than 15 days old, *adde* the hours and minutes of her *shining*, to the hours and minutes of the *Suns Rising*, and the sum will be the time of the *Moons Rising*. But,

2. If the Moon be decreasing, that is, if she be above 15 days old, *substract* the hours and minutes of her *shining* from the hours and minutes of the *Suns Rising*, and the remainer will be the time of the *Moons Rising*.

For the moons Setting.

1. If the Moon be lesse than 15 days old, *adde* the time of her *shining* to the time of the *Suns setting*, the sum is her *setting* —— But,

2. If the Moon be above 15 days old, *substract* her *shining* from the *Suns setting*, the remainer is her *setting*, adding or substracting 12 hours if need be.

IV. To find the hour of the Night by the Moons Shadow on a Sun-Dial.

Find at what time the Moon comes to the South as before, which known, mark how much the Shadow upon the Dial wants of 12; which take from the time of the Moons coming to the South, the remainder is the hour of the Night. But if the Shadow be past 12, add those hours to the coming to the South, and the Sum is the hour of the Night.

Example, Upon the 6th. of *April*, the Moon being 13 days old, and comes to the South at 10 h. 24 m. and that Night I find the Shadow at 9 h. 30 m. which wants 2 h. and a half of 12, wherefore take the 2 h. and 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the Night. But if the Shadow had been 2 h. 30 m. after 12, those added to 10 h. 24 m. would make 12 h. 54 m. for the hour of the Night.

JANUARY hath XXXI. Days.

The Uſe of the SUN-DIAL.

FOR the ready finding of the Hour of the Day by this *Dial*, you muſt provide a ſtreight Staff or Ruler, which muſt firſt be divided into Ten equal parts, and then each of thoſe into ten other ſmaller parts, ſo will the whole Staff or Ruler be divided into 100 equal parts, which may be numbred by 10, 20, 30, &c. to 100; And ſo is it fitted for Uſe.

Now when you would find the Hour, you muſt erect your Staff or Ruler perpendicular, that is, ſet it upright upon ſome plain level ground, floor, or table, and note the place where the end of the ſhadow did fall, and with your Staff meaſure the length of the ſhadow in Staves lengths, and hundred parts of the length, according as it is numbred.

Example, Suppoſe that upon the 16th day of *January* I do erect my Staff perpendicular, and meaſuring the length of the ſhadow thereof, I find it to be exactly 3 times its length; wherefore finding the 16th day at the top of the Month of *January*, I find 3, 0 to ſtand againſt the 16th day, and at the top find XII, which tells me it is then juſt 12 a Clock. ——*Example* 2. Suppoſe that upon the 6th of *May* I erect my Staff as before, and meaſuring the ſhadow thereof, I find it to be twice the length of the Staff, and 24 parts more; wherefore, I look at the top of the Dial in *May*, for the 6th day, and caſting my eye along that line, towards the right hand, I find 2, 24, to ſtand in that Column, at the top of which is VII, V, which tells me it is either 7 of the Clock in the morning, or 5 in the afternoon. ——*Example* 3. Upon the 16th of *April*, I find the length of the ſhadow to be once the Staffs length and 30 parts more; I look in *April* for the 16th day in the Sun-Dial, and in the line againſt it for 1, 30, and againſt it in the fifth Column I find 1, 33 (which is the neareſt number neareſt to 1, 30, in the Table) over which there ſtands IX and III, which ſhews that it is almoſt 9 in the morning, or a little after 3 in the afternoon. ——*Example* 4. Upon the 26th of *June* I find the length of the ſhadow of the Staff to be once the whole length, and 20 parts; if I look for this Number 1, 20, in the Sun-Dial againſt the 26th of *June*, I can find no ſuch Number, but the neareſt to it leſs in that line is 1, 01, over which ſtands IX, III, and the neareſt number to it, greater, is 1, 38, over which ſtands VIII, IV; ſo that you may conclude the hour to be between 8 and 9 in the morning, or between 3 and 4 in the afternoon. A little practice will make all this plain; For *Uſus optimus Magiſter*.

Things neceſſary for Chapmen to know

A Dicker of Hides or Skins of Leather, 10 Skins
A Chaldron of Coles, 36 Buſhels
A Load of Timber, 50 Solid Foot
In a Hogſhead of Wine, 63 Gallons
In a Barrel of Beer, 36 Gallons
In a Barrel of Ale, 32 Gallons
A Groſs, 144 or 12 Dozen
A Weigh of Cheeſe, 256 Pound
Days in a Year, 365
Weeks in a Year, 52
In a Rowl of Velam or Parchment, 60 Skins
In a Ream of Paper, 500 Sheets, or 20 quires
A Tun of Wine, 252 Gallons
In an Acre of Land, 160 Perches
In a Rod of Land, 40 Perches
In a Perch of Land, 272½ Foot
In a Perch, Pole, or Rod in Length only, 16½ Foot
A Bale of Paper, 10 Reams
A Pipe or But of Wine, 126 Gallons
In a Laſt of Corn, 10 quarters, or 80 Buſhels
A Tun of Iron, 20 hundred weight or 2240 pound weight
A Fodder of Lead, 19½ hundred weight, or 2184 pound
A Tod of Woull is 28 Pound,
A Sack, 364 pound
A Laſt, 4368 pounds
A Load of Bricks, 500 Bricks

By knowing the Price of the Pound Weight of any Commodity in Farthings, to know the Price of the great Hundred (or 112 l. Weight.)

For every Farthing that One Pound doth Coſt.
Reckon Two Shillings and a Groat,
And that's the price of the Great Hundred Weight.

The Use of the Table of Accounts.

This Table will serve for many good purposes, but it is principally intended for the Chapmans use in Buying and Selling of any Commodity by the Yard, Ell, Pound, Hundred, Gallon, &c. And its use is very easie; as by

Example I.

At 9 d. the Yard, what will 70 yards come to?

Look for 9 d. at the head of the Table, and for 70 in the first Row or Column of the same Table, and against 70, under 9 d. you shall find 2 l. 12 s. 6 d. And so much will 70 Yards at 9 d. the Yard come to.

Also, *At 5 d. the Gallon, 500 Gallons will come to* 10 l. 8 s. 4 d.

And so of any other Price, or any other Number.

But if you cannot find your just Price at the head of the Table, nor your just Number on the side, you must then take it at twice, and adde them together, and the sum shall answer your Question.

Example II.

At 7 s. the Dozen of Gloves, what will 78 dozen come to?

	l.	s.	
70 Dozen at 7 s. comes to	24	10	
8 Dozen at 7 s. comes to	2	16	
The Sum	27	06	

So that 78 Dozen at 7 s. the Dozen, come to 27 l. 6 s.

Example III.

At 3 s. 5 d. 3 q. the Ell, what will 300 Ells come to?

	l.	s.	d.
300 Ells at 3 s. comes to	45	0	0
300 Ells at 5 d. comes to	6	5	0
300 Ells at 3 q. comes to	0	18	9
The Price of 300 Ells	52	3	9

Example IV.

At 7 d. halfpeny the Pound, what will 92 Pound come to?

	l.	s.	
90 Pound at 7 d. the Pound, comes to	2	12	
2 Pound at 7 d. the Pound, comes to	0	01	
90 Pound at a halfpeny, comes to	0	03	9
2 Pound at a halfpeny, comes to	0	00	1
The Price of 92 Pound, at 7 d. 2 q.	2	17	6
